      - Due to missing tests no recommendation to the glove material can be given for the product.
      - Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation
      - The glove material has to be impermeable and resistant to the product.
        - Material of gloves
          - The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
        - Penetration time of glove material
          - The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

· Carcinogenic categories
  Ethylbenzene
  From IARC MONOGRAPHS VOLUME 77/2000
  Human carcinogenicity data
  Two studies of workers potentially exposed to ethylbenzene in a production plant and a styrene polymerization plant were available. In the first study, no excess of cancer incidence was found but the description of methods was insufficient to allow proper evaluation of this finding. In the second study, no cancer mortality excess was observed during the follow-up of 15 years.

  Evaluation
  There is inadequate evidence in humans for the carcinogenicity of ethylbenzene. There is sufficient evidence in experimental animals for the carcinogenicity of ethylbenzene.
