### Exposure controls

- **Personal protective equipment:**
  - **General protective and hygienic measures:**
    - Keep away from foodstuffs, beverages and feed.
    - Immediately remove all soiled and contaminated clothing.
    - Wash hands before breaks and at the end of work.
    - Store protective clothing separately.
    - Avoid contact with the eyes and skin.
    - Pregnant women should strictly avoid inhalation or skin contact.
  
- **Breathing equipment:**
  - In case of brief exposure or low pollution use respiratory filter device. In case of intensive or longer exposure use respiratory protective device that is independent of circulating air.

- **Protection of hands:**

  ![Protective gloves](image)

  Due to missing tests no recommendation to the glove material can be given for the product. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation The glove material has to be impermeable and resistant to the product.

  - **Material of gloves**
    - The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
  
  - **Penetration time of glove material**
    - The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

    Polymerise spontaneously, if not inhibited, with rapid increase of temperature. In closed containers, has also rapid increase of ressione. Polymerise violently with reaction that can be explosive by the action of light, heat, strong acids or perossidi. Presence of inhibitors reduces - but does not eliminate - the tendency to polymerization.

    Avoid exposure to direct sunlight or storage or exposure to temperatures higher than 25 °C

- **Possibility of hazardous reactions**
  Exothermic polymerization.
  Reacts with acids, alkalis and oxidizing agents.
  Vapours may form explosive mixtures with air

- **Conditions to avoid**
  Avoid exposure to direct sunlight or storage or exposure to temperatures higher than 25 °C

- **Incompatible materials:** Acids, alkalis and oxidizing agents

- **Hazardous decomposition products:**
  in case of possible formation of combustion:

- **Primary irritant effect:**
  - **on the skin:** Irritant to skin and mucous membranes.
  - **on the eye:** Irritating effect.
- **Sensitization:** No sensitizing effects known.
- **Additional toxicological information:**
  - Irritant
  - Causes skin irritation.
  - Causes serious eye irritation.
  - Suspected of damaging the unborn child.
  - May cause respiratory irritation.
  - Causes damage to the hearing organs through prolonged or repeated exposure.
  - May be fatal if swallowed and enters airways.

- **Carcinogenic categories**
  - **Styrene**
    - An increased incidence of lung tumors was observed in mice from an inhalation study on styrene. The relevance of this finding to humans is uncertain since data from mode of action investigations of mouse lung tumors coupled with other long-term animal studies and epidemiology studies of workers exposed to styrene do not provide a basis to conclude that styrene is carcinogenic.
  - **Ethylbenzene**
    - From IARC MONOGRAPHS VOLUME 77/2000
    - Human carcinogenicity data
      - Two studies of workers potentially exposed to ethylbenzene in a production plant and a styrene polymerization plant were available. In the first study, no excess of cancer incidence was found but the description of methods was insufficient to allow proper evaluation of this finding. In the second study, no cancer mortality excess was observed during the follow-up of 15 years.
    - Evaluation
      - There is inadequate evidence in humans for the carcinogenicity of ethylbenzene. There is sufficient evidence in experimental animals for the carcinogenicity of ethylbenzene.
